

How To

Navigate iWind

The Apple Watch app is organized around the spot view. From there, a few simple gestures take you to profiles, settings, radar, and forecast charts.

01

Start at the spot view

The main Apple Watch screen shows the selected spot with wind speed, direction, temperature, and the latest update age.

02

Switch profiles

Use the profile list to choose a favorites profile. The spot view updates to show the spots saved in that profile.

03

Swipe for nearby tools

Swipe left from the spot view for settings. Swipe right for radar.

04

Tap into charts

Open forecast charts from a spot to compare available models such as HRRR, Blend, and NAM 3k.

05

Use iPhone for management

On iPhone, sign in, manage profiles, search for spots, add spots, remove spots, and sync settings back to Apple Watch.

06

Keep it glanceable

Add a complication or widget so the selected spot remains visible without opening the app.
